

At Memorial Hermann Rehabilitation Hospital-Katy, our patients come first. We provide care to individuals recovering from injuries or suffering from chronic diseases that have impaired their physical or cognitive functioning. Our hospital offers access to the most advanced, innovative rehabilitation services available, with a focus on personalized, patient-centered care.

**INPATIENTS SERVED IN 2020**

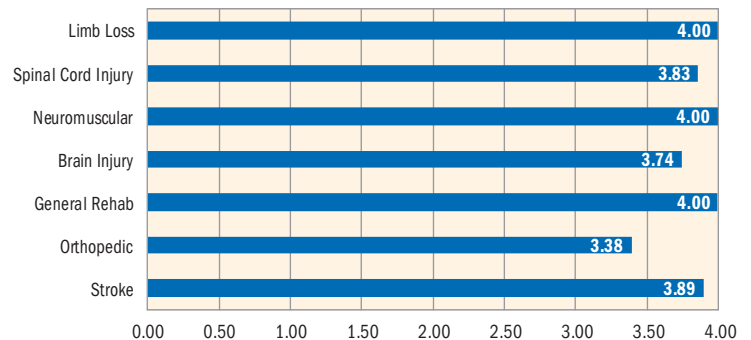

**Therapy Services**

**Individualized and Group Therapy**  
Shown in hours and minutes, per patient, per week  
**ALL Patients**

**Patient Satisfaction**

**Overall satisfaction with the program**  
(scale 0.00 – 4.00)

As well as individual and group therapy sessions, the hospital's weekend program also offers family education classes, additional therapy needs, group and leisure activities, and allows for additional time necessary for family training.

Patient satisfaction surveys are one of the ways we measure how effective our programs are in helping patients achieve more functional independence and return to their communities.

\*Data obtained from erehabdata.com® for reporting period CY2020. Stats include all patients.

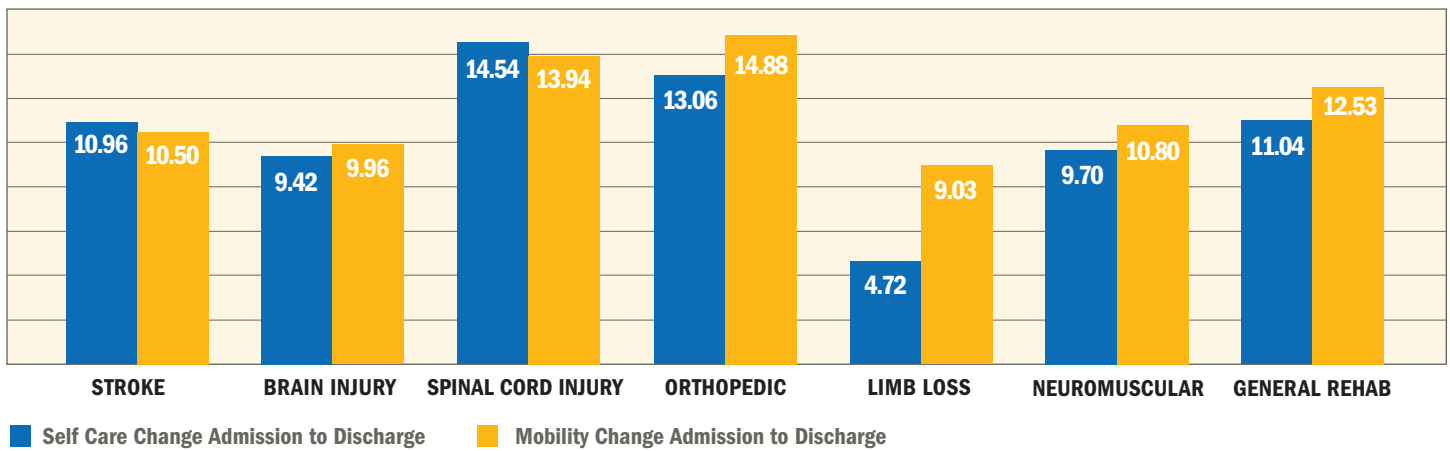

Data obtained from IT HealthTrack for the reporting period CY 2020.

The only freestanding inpatient rehabilitation hospital in west Houston, Memorial Hermann Rehabilitation Hospital-Katy offers 35 private rooms for patients recovering from illnesses or injuries suffering from chronic diseases that have impaired their physical and/or cognitive functioning.

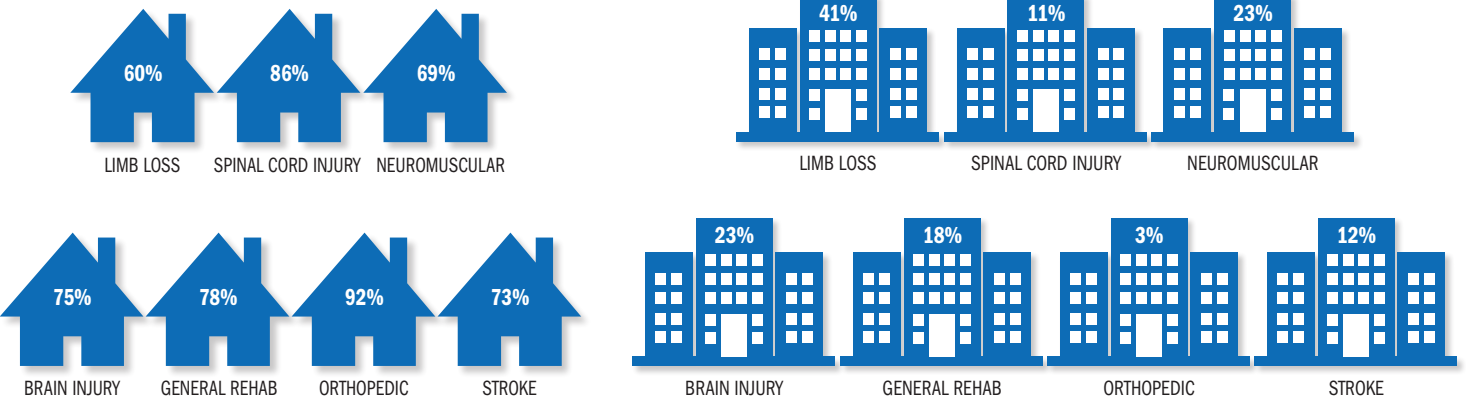

**REHABILITATION OUTCOMES**

The self care and mobility outcome measures are used to assess the progress of a patient’s functional skills such as dressing, bathing, and eating. They are also used to measure the effectiveness of rehabilitation care delivered by the rehab team; as well as, the effectiveness of the rehab program. This score is measured upon admission and again right before discharge. The difference between the two scores represents the patient’s functional gains achieved in response to an inpatient rehabilitation therapy program.

**MHRH-K Program Effectiveness**

**DISCHARGE LOCATION**

Percentage of patients discharged to home or community

Percentage of patients discharged to an acute-care facility

Sometimes patients with medical complications have to return to an acute-care hospital for further medical care. When these transfers are not planned, they are called unplanned acute-care transfers.
